The present sequence represents a secoisolariciresinol dehydrogenase protein. The enzyme is involved in the ligana biosynthetic pathway. The secoisolariciresinol dehydrogenase proteins have a molecular care weight of 27-31 KDa, an isoalactric point of 5.9-6.85, and require weight of 27-31 KDa, an isoalactric point of 5.9-6.85, and require comparing the national care acids are used for the recombinant expression of the enzymes. It is also used to obtain expression or enhanced expression of secoisolariciresinol dehydrogenase in plants or to alter lignan of secoisolariciresinol dehydrogenase in plants or to alter lignan biosynthesis. The enzyme is used for production of the pharmacologically active lignan, matairssinol. The secoisolariciresinol dehydrogenase of proteins and mucleic acids can be utilized to: elevate or otherwise care the enzymes of health-protecting lignans, including phytoseprotect and mucleic acids can be utilized to: elevate or otherwise cause mucleic acids can be utilized to: elevate or otherwise vegetables, grains and fruits and to food items incorporating material vegetables, grains and fruits and to food items incorporating material vegetables, provide an abundant, natural supply of lignans useful for a variety of purposes, for example as neutriceuticals and dietary cause properties, to genetically alter living organisms to produce an example (-)-tradeposenticals and (-)-tradepo

New nucleic acid molecule encoding an enzyme involved in lignan biosynthetic pathway, useful for producing large amounts of lignans

                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a secoisolariciresinol dehydrogenase protein. The enzyme is involved in the lignan biosynthetic pathway. The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 kDa, an isoelectric point of 5:9-6.85, and require NAD or NADP as a cofactor. The secoisolariciresinol dehydrogenase nucleic acids are used for the recombinant expression of the enzymes. It is also used to obtain expression or enhanced expression of secoisolariciresinol dehydrogenase in plants or to alter lignan biosynthesis. The enzyme is used for production of the pharmacologically active lignan, mateliresinol. The secoisolariciresinol dehydrogenase proteins and nucleic acids can be utilized to: elevate or otherwise alter the levels of health-protecting lignans, including phytoestrogens such as enterolactone and enterodiol, in plant species, including charted from such genetically alter food items incorporating material derived from such genetically altered plants; genetically alter plant species to provide an abundant, natural supply of lignans useful for a variety of purposes, for example as neutriceuticals and dietary a variety of purposes, for example as neutriceuticals and dietary abundant supply of optically alter living organisms to produce an abundant supply of optically place lignans having desirable biological properties, for example (-) trachelogenin which possesses antiviral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          122 VTGVFLCMKHAARVMIPARSGNIISTASLSSTMGGGSSHAYCGSKHAVLALTRNLAVELG 181

ruction action are used to obtain expression or thanced expression of secoisolaric results are used to obtain expression or action biosynthesis. The enzyme is used for production of the pharmacologically biosynthesis. The enzyme is used for production of the pharmacologically active lignan, matairesinol. The secoisolariciresinol dehydrogenase proteins and nucleic acids can be utilized to: elevate or otherwise alter the levels of health-protecting lignans, including phytoestrogens ouch as enterolactone and enterodiol, in plant species, including vegetables, grains and fruits and to food items incorporating material especies to provide an abundant, natural supply of lignans useful for a variety of purposes, for example as neutriceuticals and dietary supplements; to genetically alter living organisms to produce an properties, for example (-)-trachelogenin which possesses antiviral properties, and (-)-podophyllotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8 ARRLEGKVALITGGASGIGETTAKLFSQHGAKVAIADVQDELGHSVVEAIGTSNSTYIHC 67
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ARRLEGKVALITGGASGIGETTAKLFSQHGAKVAIADVQDELGHSVVEAIGTSNSTYIHC 71
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a secoisolariciresinol dehydrogenase protein. The enzyme is involved in the lignan biosynthetic pathway. The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 kba, an isolectric point of 5.9-6.85, and require NAD or NADP as a cofactor. The secoisolariciresinol dehydrogenase nucleic acids are used for the recombinant expression of the enzymes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid molecule encoding an enzyme involved in lignan biosynthetic pathway, useful for producing large amounts of lignans

The present sequence represents a secoisolariciresinol dehydrogenase protein. The enzyme is involved in the lignan biosynthetic pathway. The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 kDa, an isoelectric point of 5.96.85, and require hot or NAPP as a coffactor. The secoisolariciresinol dehydrogenase nucleic acids are used for the recombinant expression of the enzymes. It is also used to obtain expression or enhanced expression of the enzymes. It is also used to obtain expression or enhanced expression of biosyntheeis. The enzyme is used for production of the pharmacologically active lignan, matairesinol The secoisolariciresinol dehydrogenase proteins and nucleic acids can be utilized to: elevate or otherwise active lignan, matairesinol. The secoisolariciresinol dehydrogenase proteins and nucleic acids can be utilized to: elevate or otherwise such as enterolactone and enterodiol, in plant species, including phycostical enterolactors and enterodiol, in plant species, including material derived from such genetically altered plants; supplements; to genetically alter living organisms to produce an abundant, natural supply of lighans useful for supplements; to genetically pure lighans having desirable biological properties, for example (-)-traceledgemin which possesses antiviral properties, and (-)-podophyllotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New nucleic acid molecule encoding an enzyme involved in lignan biosynthetic pathway, useful for producing large amounts of lignans

The present sequence represents a secoisolariciresinol dehydrogenase protein. The enzyme is involved in the lignan biosynthetic pathway.

The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 kDa, an isoelectric point of 5.9-6.85, and require the secoisolariciresinol dehydrogenase proteins and engine of 27-31 kDa, an isoelectric point of 5.9-6.85, and require to mode of the secoisolariciresinol dehydrogenase in the salso used to obtain expression or enhanced expression of the enzymes. The enzyme is used for production of the pharmacologically active lignan, matairesinol and production of the pharmacologically active lignan, matairesinol. The secoisolariciresinol dehydrogenase proteins and nucleic acids can be utilized to: elevate or otherwise context and enclar of health-protecting lignans, including phytosetrogenes and nucleic acids can be utilized to: elevate or otherwise such as enterolactone and entercadiol, in plant species, including phytosetric derived from such genetically allered plants; genetically alter plant species to provide an abundant, natural supply of lignans useful for a variety of purposes, for example as neutriculals and dietary supplements; to genetically alter living organisms to produce an abundant, purchasely experience, for example as neutriculals and dietary supplements; to genetically pure lignans having desirable biological properties, for example (-)-transferongenium which possesses antiviral process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acid molecule encoding an enzyme involved in lignan biosynthetic pathway, useful for producing large amounts of lignans
                                                                                                                                                                                                                                                                                  Secoisolariciresinol dehydrogenase; lignan biosynthetic pathway; lignan, matairesinol; health-protecting lignan; phytoestrogen; enterolactone; enterodiol; neutriceutical; dietary supplement; (-)-trachelogenin; antiviral; (-)-podophyllotoxin.

recoisolaricires. Outside the properties of the pharmacologically biosynthesis. The enzyme is used for production of the pharmacologically biosynthesis. The enzyme is used for production of the pharmacologically active lighan, matairesinol. The secoisolariciresinol dehydrogenase proteins and nucleic acids can be utilized to: elevate or otherwise alter the levels of health-protecting lignans, including phycoestrogens such as enterolactone and enterodiol, in plant species, including vegetables, grains and fruits and to food items incorporating material derived from such genetically altered plants; genetically alter plant species to provide an abundant, natural supply of lignans useful for a variety of purposes, for example as neutriceuticals and dietary supplements; to genetically alter living organisms to produce an abundant supply of optically pure lignans having desirable biological properties, for example (-)-trachelogenin which possesses antiviral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a secoisolariciresinol dehydrogenase protein. The enzyme is involved in the lignan biosynthetic pathway. The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 kba, an isoelectric point of 5.9-6.85, and require NAD or NADP as a coffactor. The secoisolariciresinol dehydrogenase nucleic acids are used for the recombinant expression of the enzymes. It is also used to obtain expression or enhanced expression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acid molecule encoding an enzyme involved in lignan biosynthetic pathway, useful for producing large amounts of lignans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Secoisolariciresinol dehydrogenase; lignan biosynthetic pathway; lignan; matairesinol; health-protecting lignan; phytoestrogen; enterolactone; enterodiol; neutriceutical; dietary supplement;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Trypsin fragment of a secoisolariciresinol dehydrogenase protein
Secoisolariciresinol dehydrogenase; lignan biosynthetic pathway;
                     lignan; matairesinol; health-protecting lignan; phytoestrogen; enterolactone; enterodiol; neutriceutical; dietary supplement; (-)-trachelogenin; antiviral; (-)-podophyllotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Length 277;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  4.3e-26;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           content in seeds of a monocotyledon plant, comprising selecting at least formation, stably transforming a monocotyledon plant with chimeric gene (CG) constructs having a seed-specific transcriptional regulatory region operably linked to a nucleic acid sequence encoding the enzyme. The method of the invention is useful for stably transforming a monocotyledonous plant (e.g. rice) with CG constructs resulting in increased expression of the genes encoded by CG constructs. The G-lignan enriched seed composition is useful as a food additive. This sequence represents the secoisolariciresinol dehydrogenase protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method for increasing the guaiacyl (G)-lignan
                                                                                                                                                                                                                                                Guaiacyl (G)-lignan, monocotyledon plant, rice, food additive,
seed-specific transcriptional regulatory region, dehydrogenase, enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Increasing guaiacyl-lignan content in monocotyledon plants, by transforming plant with chimeric gene construct having seed-specific transcriptional regulator linked to gene encoding protein involved in G-lignan formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The present sequence represents a peptide of a secoisolariciresinol dehydrogenase. The enzyme is involved in the lignan biosynthetic pathway. The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require nucleic acids are used for the secoisolariciresinol dehydrogenase in plants or to alter lignan secoisolariciresinol dehydrogenase in plants or to alter lignan biosynthesis. The enzyme is used for production of the pharmacologically active lignan, matairesinol. The secoisolariciresinol dehydrogenase active lignan, matairesinol. The secoisolariciresinol dehydrogenase alter the lavels of health-protecting lignans, including phytoestrogens such as enterolactone and enterodiol, in plant species, including cause and treated plants; genetically alter plant species to provide an abundant, natural supply of lignans useful for a variety of purposes, for example as neutricenticals and dietary supplements; to genetically alter living organisms to produce an abundant supply of poptically pure lignans having desirable bloogical properties, and (-)-podophyllotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

                                                                                                                                                                                                  The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the B-value of most similar non-plant are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.

The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are

The present sequence represents a peptide of a secoisolariciresinol dehydrogenase. The enzyme is involved in the lignan biosynthetic pathway. The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 kDa, an isoelectric point of 5.9-6.85, and require weight of 27-31 kDa, an isoelectric point of 5.9-6.85, and require conclain acids are used for the recombinant expression of the enzymes. It is also used to obtain expression or enhanced expression of the enzymes. It is also used to obtain expression or enhanced expression of blosynthesis. The enzyme is used for production of the pharmacologically active lignan, matairesinol. The secoisolariciresinol dehydrogenase of proteins and nucleic acids can be utilized to: elevate or otherwise catler the levels of health-protecting lignans, including phytroestrogens such as enterolactone and enteroclain, in plant species including can be utilized to: elevate or otherwise such genetically altered blants; genetically altered plants; genetically altered from such genetically altered blants; genetically alter plant capecies to provide an abundant, natural supply of lignans useful for a variety of purposes, for example as neutriceuticals and dietary compundant supply of optically pure lignans having desirable biological componenties, for example (-)-trachelogenin which possesses antivital) componenties, and (-)-podophyllotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

```

```
The present invention describes substantially purified human proteins (referred to as open reading frame, OREX, where X is 1-11491 (see Table 1 in the specification) ABN15762 to ABN27352 encode the human OREX in the specification) ABN15762 to ABN27352 encode the human OREX recting given in ABP00010 to ABP11500. OREX proteins are useful for treating a pathology associated with an OREX-associated disorder. OREX polynucleotide syndrome associated with OREX-associated disorder. OREX polynucleotide sequences can be used in gene therapy. OREX sequences can be used in the treatment of cancer, hyperproliferative disorders, cirrhosis of liver, psoriamis, benign tumours, keloid, degenerative disorders related to organ transplantation, cardiovascular diseases, diabetes mellitus systemic clupus extythematosus, hypertension, prycthyroidism, cholesterol ester storage disease, various immune disorders and disorders, infectious disease, autorimmune disorders such as multiple sclerosis, rheumatoid arthritis, autorimmune disorders such as multiple sclerosis, rheumatoid arthritis, autorimmune inflammatory eye disease. OREX proteins are also consensed and autorimmune inflammatory eye disease. OREX proteins are also bone degenerative disorders, or lorest fibrosis, consection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues and conditions resulting from systemic cytokine damage.

CN DES The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperpoliferative disorders and autoimmune disorders

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                      273
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description

APPLICANT: Susan E. Jensen

APPLICANT: Anish S. Paradkar

TITLE OF INVENTION: DNA Sequence Encoding Enzymes of Clavulanic

PRECH NO. 6232106

TITLE OF INVENTION: Acid Biosynthesis

NUMBER OF SEQUENCES: 25

CORRESPONDENCE ADDRESS:

ADDRESSES: JACOBSON, PRICE, HOLMAN & STERN, PPLC

STREET: The Jenifer Buliding, 400 Seventh Street, N.W.

CITY: Washington

CONDITY: U.S.A.

STREET: The Jenifer Buliding, 400 Seventh Street, N.W.

CONDITES: IBM PC compatible

Patent No. 6268479

GENERAL INFORMATION:
APPLICANT: Stern, David M.
APPLICANT: Yan, Shi Du
TITLE OF INVENTION: AN INTRACELLULAR AMYLOID-BETA PEPTIDE
TITLE OF INVENTION: BINDING (ERAB) POLYPEPTIDE AND METHODS FOR INHIBITING
TITLE OF INVENTION: BINDING (ERAB) POLYPEPTIDE
TITLE OF SEQUENCES:
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: GOODER & Dunham LLP

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Glohing and sequencing of a 2,5-dichloro-2,5-cyclohexadiene-1,4-diol
dehydrogenase gene involved in the degradation of gamma-
hexachlorocyclohexane in Pseudomonas paucimobilis.";

J. Bacteriol. 176:3117-3125(1994).

-!- FUNCTION: DEGRADATION OF 2,5-DICHLORO-2,5-CYCLOHEXADIENE-1,4-DIOL
(2,5-DDOL) INTO 2,5-DICHLOROHYDROQUINONE (2,5-DCHQ). LINX IS NOT
ESSENTIAL TO GAMMA-HCH DEGRADATION.

-!- PATHWAY: Degradation of gamma-hexachlorocyclohexane.

-!- SATHWAY: Degradation of gamma-hexachlorocyclohexane.

-!- SIMILARITY: Belongs to the short-chain dehydrogenases/reductases
(SDR) family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   LINX PSEPA STANDARD; PRT; 250 AA.

"Analysis of the Bacillus subtilis genome: cloning and nucleotide
sequence of a 62 kb region between 275 degrees (rrnB) and 284 degrees
regulation map for Bacillus subtilis.";
Electrophoresis 18:1451-1463(1997).
-!- INDUCTION: BY HEAT SHOCK, SALT STRESS, OXIDATIVE STRESS, GLUCOSE
LIMITATION AND OXYGEN LIMITATION.
-!- SIMILARITY: Belongs to the short-chain dehydrogenases/reductases (SDR) family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

"Sequence of the sor-operon for L-sorbose utilization from Klebsiella
-1- CATALYTIC ACTIVITY: 2-deoxy-D-gluconate + NAD(+) = 3-dehydro-2-deoxy-D-gluconate + NADH.
-1- PATHMAY: Pectin degradation.
-1- SIMILARITY: Belongs to the short-chain dehydrogenases/reductases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Bacteriol. 169:427-429(1997).
--- CAPALYTIC ACTIVITY: Cis-3-phenylcyclohexa-3,5-diene-1,2-diol + NADH.
                                                MEDLINE=95380679; PubMed=7652212;
Reizer J., Reizer A., Saier M.H. Jr.;
Reizer J., Faciuct A., Saier M.H. Jr.;
Reizer J., Faciuctase (SOCE) and the Glucitol-6-P dehydrogenase (SorD) of the Klebsiella pneumoniae L-sorbose operon belong to the zinc-dependent dehydrogenase family and the short chain alcohol dehydrogenase family, respectively.";
Res. Microbiol. 146:183-184 (1995).
-!- CATALYTIC ACTIVITY: D-sorbitol 6-phosphate + NAD(+) = D-fructose 6-phosphate + NADH.
-!- PATHWAY: SORBITOL METABOLIC PATHWAY.
-!- SUBWINT: Homotetramer (By similarity).
-!- SUBWINT: Belongs to the short-chain dehydrogenases/reductases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0; Gaps

HuelBameyer M., Schomburg D.;
"Crystal structure of cis-biphenyl-2,3-dihydrodiol-2,3-dehydrogenase
from a PCB degrader at 2.0-A resolution.";
Protein Sci. 7:1286-1298 (1998).
-!-CATALYTIC ACTIVITY: Cis-3-phenylcyclohexa-3,5-diene-1,2-diol +
NAD(4) = biphenyl-2,3-diol + NADB.
-!-PATHWAY: DEGRADATION OF BIPHENYLS AND POLYCHLOROBIPHENYLS (PCB) TO
BENZOTC ACID AND CHLOROBENZOIC ACIDS; SECOND STEP.
-!-SIMILARITY: Belongs to the short-chain dehydrogenases/reductases
(SDR) family.
-!- PATHWAY: DEGRADATION OF BIPHENYLS AND POLYCHLOROBIPHENYLS (PCB) T
BENZOIC ACID AND CHLOROBENZOIC ACIDS; SECOND STEP.
-!- SIMILARITY: Belongs to the short-chain dehydrogenases/reductases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      01-FEB-1996 (Rel. 33, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    FERS Microbiol. Lett. 154:317-324(1997).
-!- CATALYTIC ACTIVITY: Cis-3-phenylcyclohexa-3,5-diene-1,2-diol +
NAD(+) = biphenyl-2,3-diol + NADH.
-!- PATHWAY DEGRADATION OF BIPHENYLS AND POLYCHLOROBIPHENYLS (PCB) T
BENZOIC ACID AND CHLOROBRAZOIC ACIDS; SECOND STEP.
-!- SUBUNIT: Homotertramer (Probable).
-!- SIMILARITY: Belongs to the short-chain dehydrogenases/reductases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Kawamukai M.;
"S.pombe ribosomal protein L27 homolog.";
"S.pombe ribosomal protein L27 homolog.";
Submitted (UNN-1998) to the EMBL/Genbank/DDBJ databases.
--- MISCELLANEOUS: THERE ARE TWO GENES FOR L27 IN S.POMBE.
--- SIMILARITY: BELONGS TO THE L27E FAMILY OF RIBOSOWAL PROTEINS.

                                                                                                                                                                                                                                                                                                                         SUBUNIT: Homodimer; disulfide-linked.
SUBCELLULAR LOCATION: Cytoplasmic.
SUBCELLULAR LOCATION: Cytoplasmic.
CISSUE SPECIFCITY: BODY WALL GLOBIN IS LOCALIZED IN CELLULAR COMPARTMENTS BELONGING TO THE HYPODERMIS, THE DORSAL, VENTRAL AND LATERAL CORDS, THE NETVE RING, AND BODY WALL MUSCLE.
PTM: THE N-TERMINUS IS BLOCKED.
SIMILARITY: Belongs to the globin family.
                                                       01-FEB-1996 (Rel. 33, Created)
